text included). [CSIRO] Trans. no. 6306.
Order from OTS or SLA \$1.10 63-23749

Trans. of Vinodelie i Vinogradarstvo SSSR, 1962,
[v. 22] no. 1, p. 32-34.

DESCRIPTORS: *Photosynthesis, *Vitaceae, Plants
(Botany).

The effect on photosynthesis intensity of removing
various kinds of grapevine shoots was experimentally
investigated during a two-year period. The varieties of
Khusayne, Saperavi, and White Kishmish were studied.
Photosynthesis was more intense in the leaves of fruit-
bearing shoots during the growing period, and more in-
tense when the shoots were not pinched. In shoots with

Tsigler, V. D., Belukha, P. G., and Shakhnovich, I. G.
INFLUENCE OF CERTAIN PROCESS FACTORS ON THE PROPERTIES OF LIGHT-WEIGHT KAOLIN REFRACTORIES (Vliyaniye Nekotorykh Tekhnologicheskikh Faktorov na Svoystva Kaolinykh Legkovesnykh Ogneuporov). Nov 60 [10]p. 6 refs. RTS 1548.
Order from LC or SLA ml\$1.80, ph\$1.80 61-15201

Trans. of Ogneupory (USSR) 1958 [v. 23] no. 1, p. 5-11.

The refractoriness of kaolin light-weight articles depends upon the ash content of the combustible employed. Every 10% of combustible with an ash content of not more than 10% decreases the refractoriness of the articles by up to 5°. The density of kaolin light-weight articles (about 1.3 g/cm³) is dependent upon the combustible, which should be introduced into the charge in quantities increasing with increasing firing (Materials--Refractories, TT, v. 5, no. 6) (over)
